The spnet package

Plotting (social) networks on maps

CRAN 0.9.1-0 downloads 6436

Social networks analysis has received special attention over the past decade, and a lot of tools for manipulating and rendering social networks have emerged. In several situations a social network is associated with a spatial dimension, and behaviors observed within the network cannot be interpreted without taking into account the location of each of its nodes regarding to the other nodes. This is the case, for example, when studying inflows/outflows between cities or companies, or when studying people debating in a room. Based on the `sp` package, which provides efficient classes for storing spatial data and methods for handling and rendering them, the `spnet` package aims at facilitating the rendering of (social) networks on maps. Furthermore, fixing network node positions allows to more easily monitor time-varying networks and observe how connections and flows evolve over time. In the future the package will be also designed to be used together with the `Rsocialdata` package for which tools for preparing network data are in development.

Authors: Emmanuel Rousseaux, Marion Deville and Gilbert Ritschard.

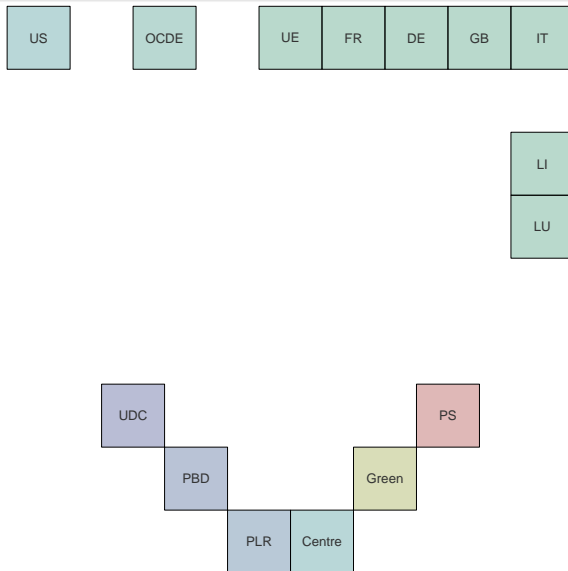

Availability:

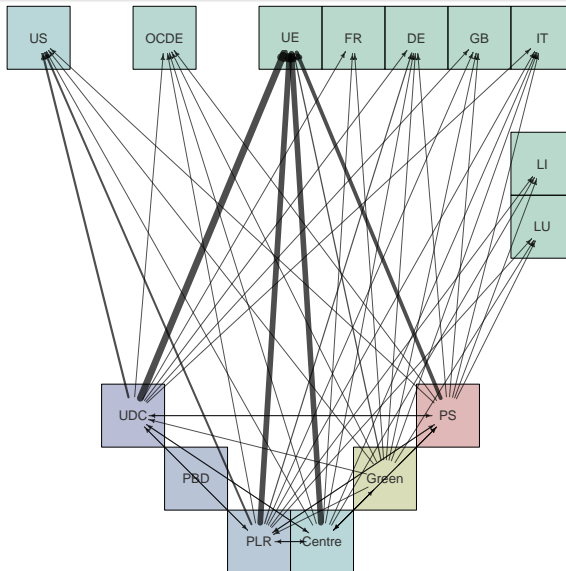

- Official released available from the [CRAN](#).
Installation: `install.packages("spnet")`
- Development version available from the [spnet R-Forge repository](#).
Installation: `install.packages("spnet", repos="http://R-Forge.R-project.org", type = "source")`

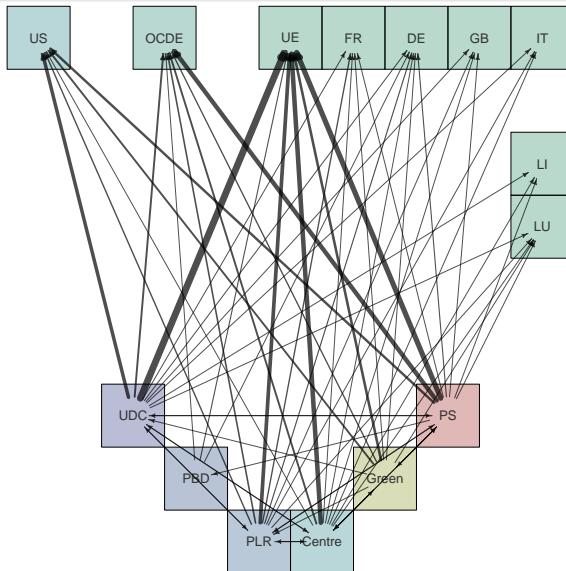

Documentation:

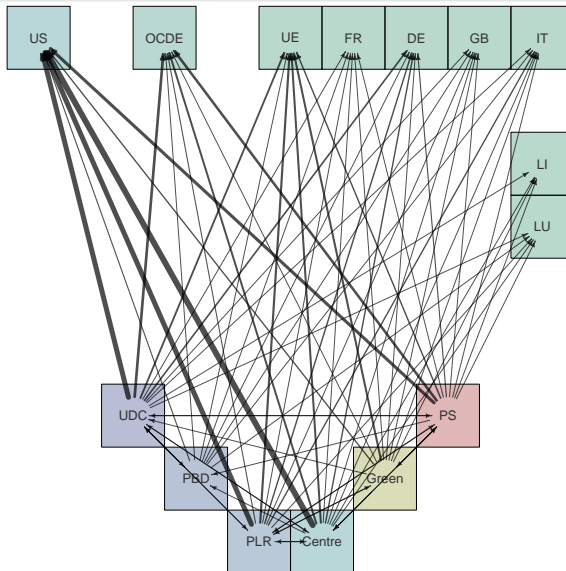

- Package vignette: *Overview of the spnet R package* ([web](#), [pdf](#))
- [Slides](#) of the presentation at the *Rencontres R 2014* conference

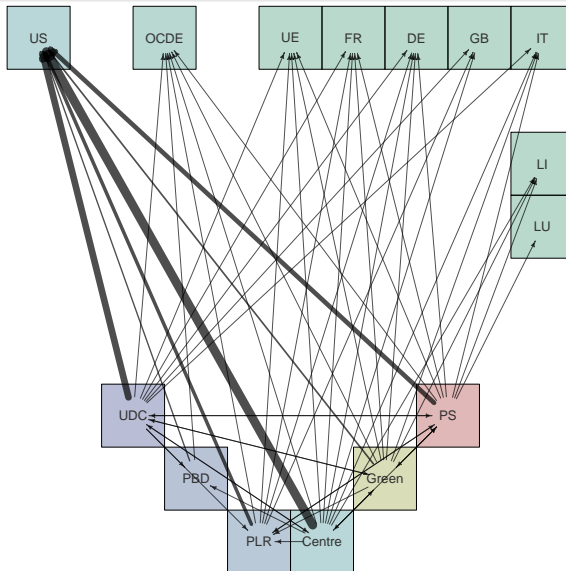

Development: The development version is hosted on the [R-Forge](#) platform.

Merci pour votre attention !
